Red Shift Cams

08/2010

For over 3 decades, Red Shift Cams have been the cams of choice for high performance engine builders for aftermarket H-D® applications.

Master engine developer and Red Shift camshaft designer Dick Hilferty has always been at the forefront of the most advanced designs in all forms of racing and performance applications. Today Dick's designs are manufactured at Zipper's Performance Products with the most advanced engineering design processes built into every cam.

## Red Shift Cams from Zipper's Performance Products

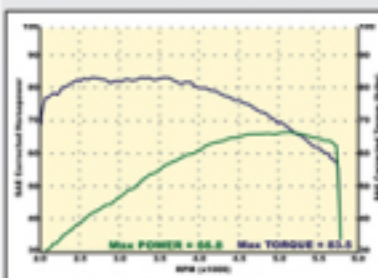

Red Shift Cams provide you with the most advanced components for power gains and unrivaled valve train dynamics. Maintaining valve train control should be every engine builder's first concern when choosing a camshaft. A lack of valve train control, or noise, simply shows a lack of dynamic sophistication and your engine will ultimately pay the price.

Zipper's has always believed that power gains should be achieved by improved sophistication and efficiency, not by compromising component reliability. Let Red Shift create the power that you desire while protecting the investment that you have in your engine and valve train.

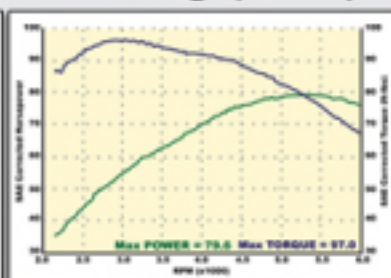

Available for these applications: '99-Up Twin Cams®, '84-'99 EV Big Twins®, '91-Up Sportsters®, '86-'90 EV Sportsters®, '57-'85 Iron Sportsters® and Buell®, XB® engines
